

MILLIONAIR HP AIRPUMPS

FEATURE

- High Technology
- Excellent and Reliable Quality
- Extremely Quiet
- Low Energy Consumption
- High Airflow
- High Output
- Safe and Quiet Operation
- Versatile
- Multi Outlet
- Controllable

The MillionAir HD air pump is a reliable source of delivering air for air operated items such as air stones, air curtains, air-actuated ornaments, creating water movement and aeration. The MillionAir HD air pump combines high performance output with quiet operation. Designed with a rheostat to control air flow and multiple outlets.

INSTRUCTIONS FOR USE

1. Connect pump to airstone or filter via air line.
2. Plug into 220-240V/110-120V power point.
3. If possible, place the pump above the aquarium. If not, ensure that a valve is fitted to the air line. Failure to do so will damage your air pump and void your warranty.
4. To prolong the pump's life, replace airstones regularly.
5. Never allow the pump to come in contact with water.

IMPORTANT SAFEGUARDS

Disconnect all the plugs of the electrical aquarium appliances before putting hands into water. We recommend that air pump and other electrical aquarium devices should be connected to power supplies with ground fault circuit interrupters.
